8.30 am-5.30pm

**Beau Monde International
934 Doncaster Road, Doncaster. 3108**

Places are limited. Call the clinic on 9848 9100 to book

WHY Pivotal Response Treatment (PRT).

- PRT is an Applied Behaviour Analysis (ABA) technique developed at the University of California at Santa Barbara, to overcome the many shortcomings of Discrete Trial Learning (DTL) and to be more naturalistic.
- Based on the principles of ABA and DTL, PRT was developed to be less rigid, involve more natural learning, and produce more rapid changes in children with Autism.
- PRT has been extensively researched and validated, with over 200 journal articles and books published.
- PRT promotes attention, motivation, language, social play, empathy and generalisation of learned skills to other areas of functioning.
- **It is also much more cost-effective and affordable.**

Cost \$700

Includes, lunch in the restaurant, morning and afternoon tea.

Extensive practice sessions, notes and additional reading material provided to ensure that all participants become competent at administering ABA using both Discrete Trial Learning and Pivotal Response Treatment.

RUN BY CHILD PSYCHOLOGISTS: JACQUES DUFF AND HELEN SALTER

Behavioural Neurotherapy Clinic. 2/314 Manningham Rd Doncaster 3108
